SUSTAINABILITY. SIMPLIFIED.

Whether you're interested in Carbon Verifications, Sustainable Development goals, or something industry specific – see how NQA's evolving suite of services can support your business needs. Our extensive offering is governed by UKAS accreditation where achievable and helps organisations to never stop improving.

ISO 14064-1

Quantification and Reporting of Greenhouse Gas (GHG) Emissions and Removals

Growing concern for climate change has led to an increased demand for organisations worldwide to improve the transparency of and accountability for their environmental footprint.

This internationally recognised standard verifies, at organisational level, the GHG emissions and mitigation activities reported by an organisation. Credible verification through an independent, impartial third party Verification Body, such as NQA, helps with supply chain pressures, tender requirements, risk mitigation and much more.

ISO 14068-1/ PAS 2060

Carbon Neutrality

For entities looking to go beyond reporting and mitigation, carbon neutrality can be used as a part of your transition to net zero.

Through GHG reductions, GHG removals and carbon credits, these robust standards are best placed to support on responsible and meaningful carbon neutrality claims.

The original specification, PAS 2060, is available until 31/12/2025 before being permanently replaced by ISO 14068-1 for verification compliance.

PAS 2080
Carbon Management in Buildings and Infrastructure

Whether you are a designer, product / material supplier, constructor, asset owner / manager or another role within the value chain of a project or programme within the buildings and infrastructure industry, this will impact you.

The standard provides a common framework within the industry, intended for a collaborative and consistent approach. Pressures are continually growing from supply chains for companies to implement and demonstrate the requirements.

ISO 20121
Sustainable Events Management Systems

This management systems standard provides a framework for organisations within the events industry, large or small, to improve performance. Through supply chain management, stakeholder engagement and continuous improvement, the standard supports organisations in the planning and delivery of sustainable events.

Following an Annex SL structure, similarly to ISO 9001, ISO 14001, and many others, the standard can be easily integrated as part of wider compliance management.

ISO 26000
Social Responsibility

Often organisations are focused on the environmental impact of sustainability related topics. This standard, however, offers a well-structured and meaningful framework for addressing social aspects as part of an organisation's commitment to sustainable practices.

The standard is centred around seven key socially responsible principles and aligns closely with the United Nation's Sustainability Development Goals (UNSDGs).
